

# GALAXIS TECHNOLOGY

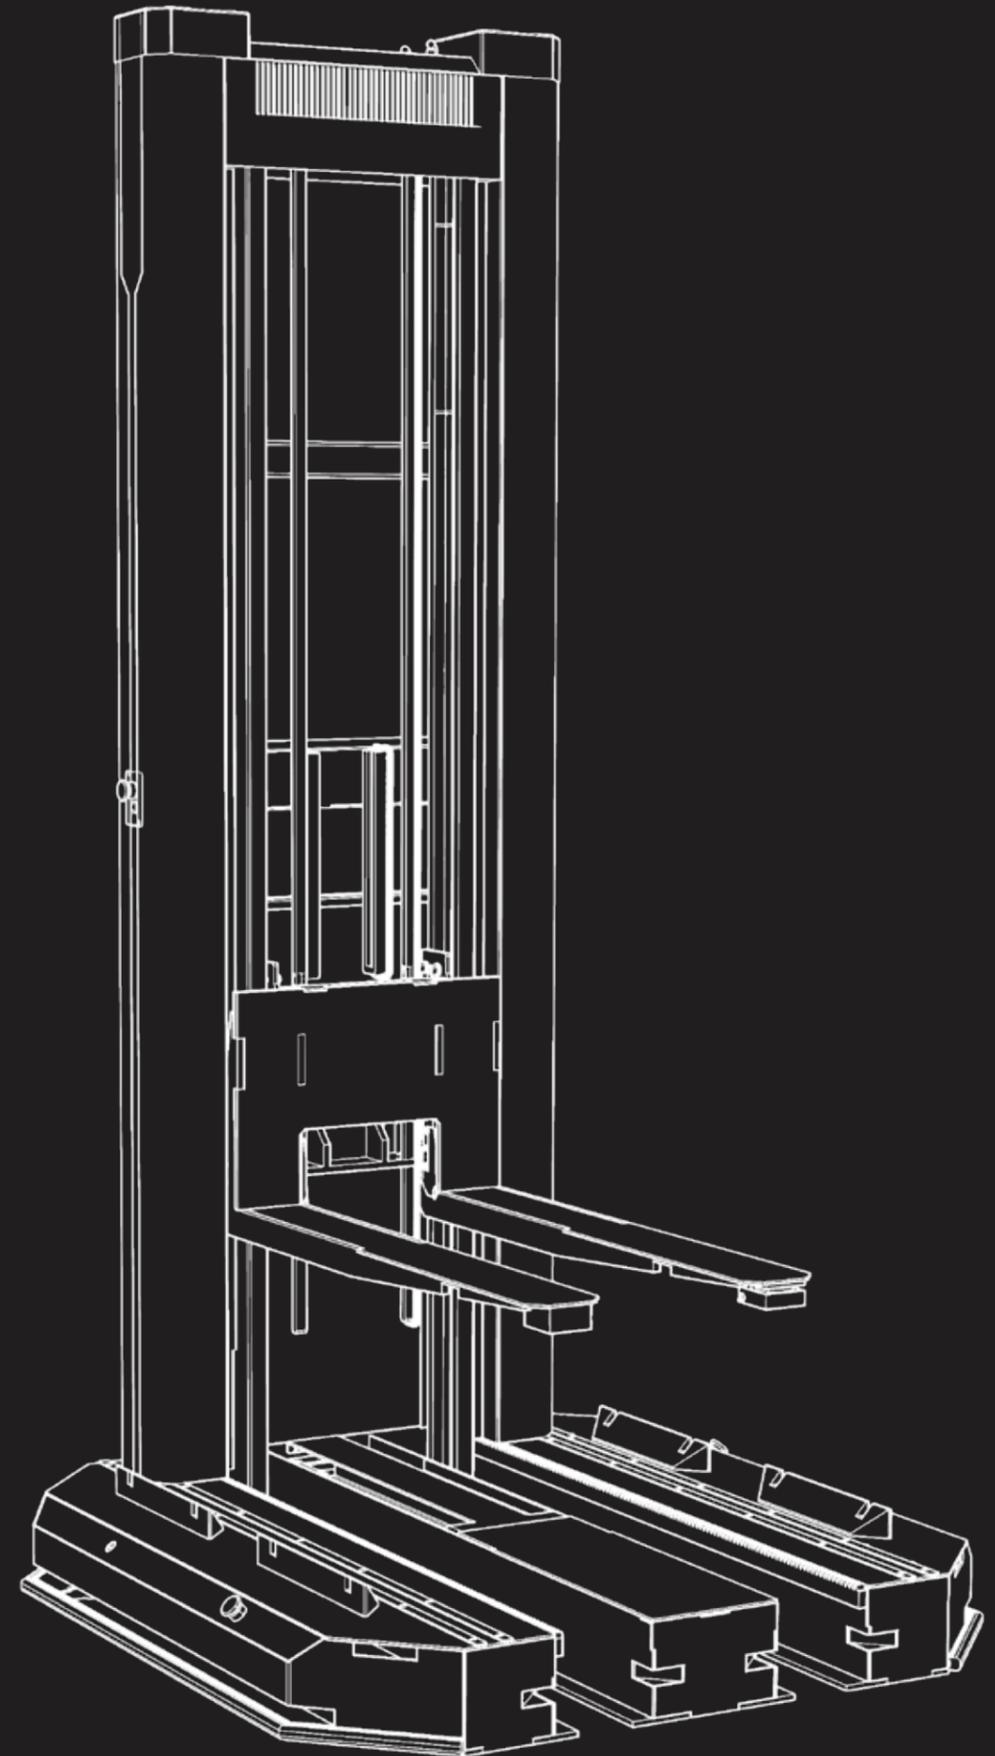

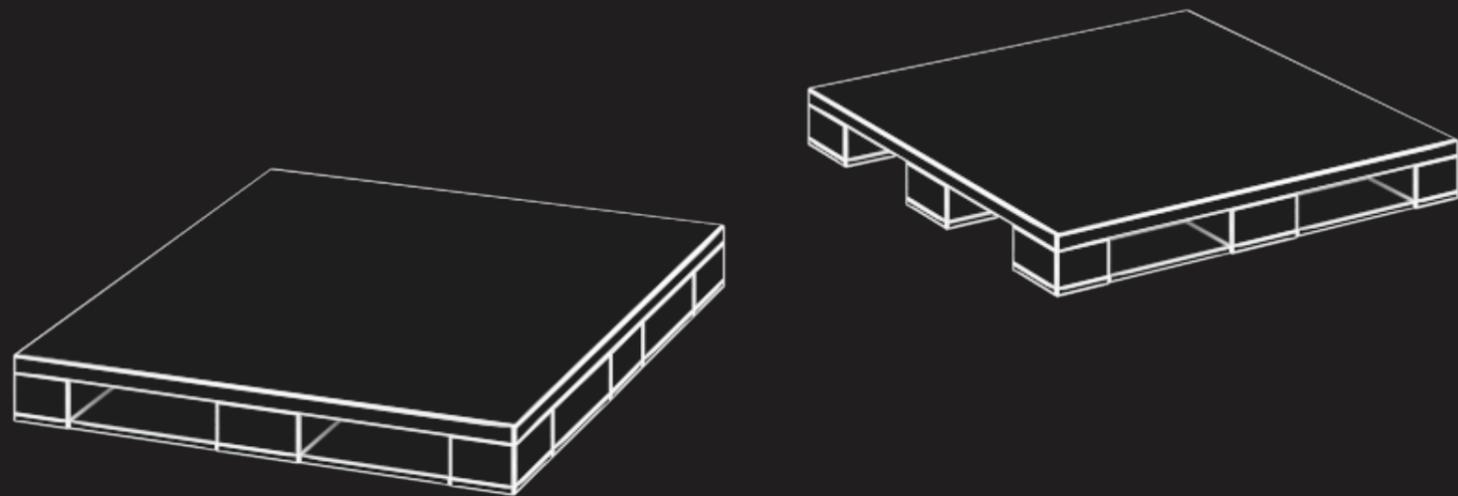

AMR ROBOT SOLUTIONS

**GALAXIS**

## GALAXIS AMR

Technology Empowers Logistics

## PTR solution

The PTR series is designed for automatic warehousing and unmanned transportation of pallets, which can offer a seamless connection to mainstream logistics information systems (ERP/WCS/WMS) to realize fast, accurate and flexible material transportation. It offers the solution for transporting pallets and large-sized goods with maximum 1000kg payload, catering to the needs of both manufacturing and distribution industries.

### Receiving

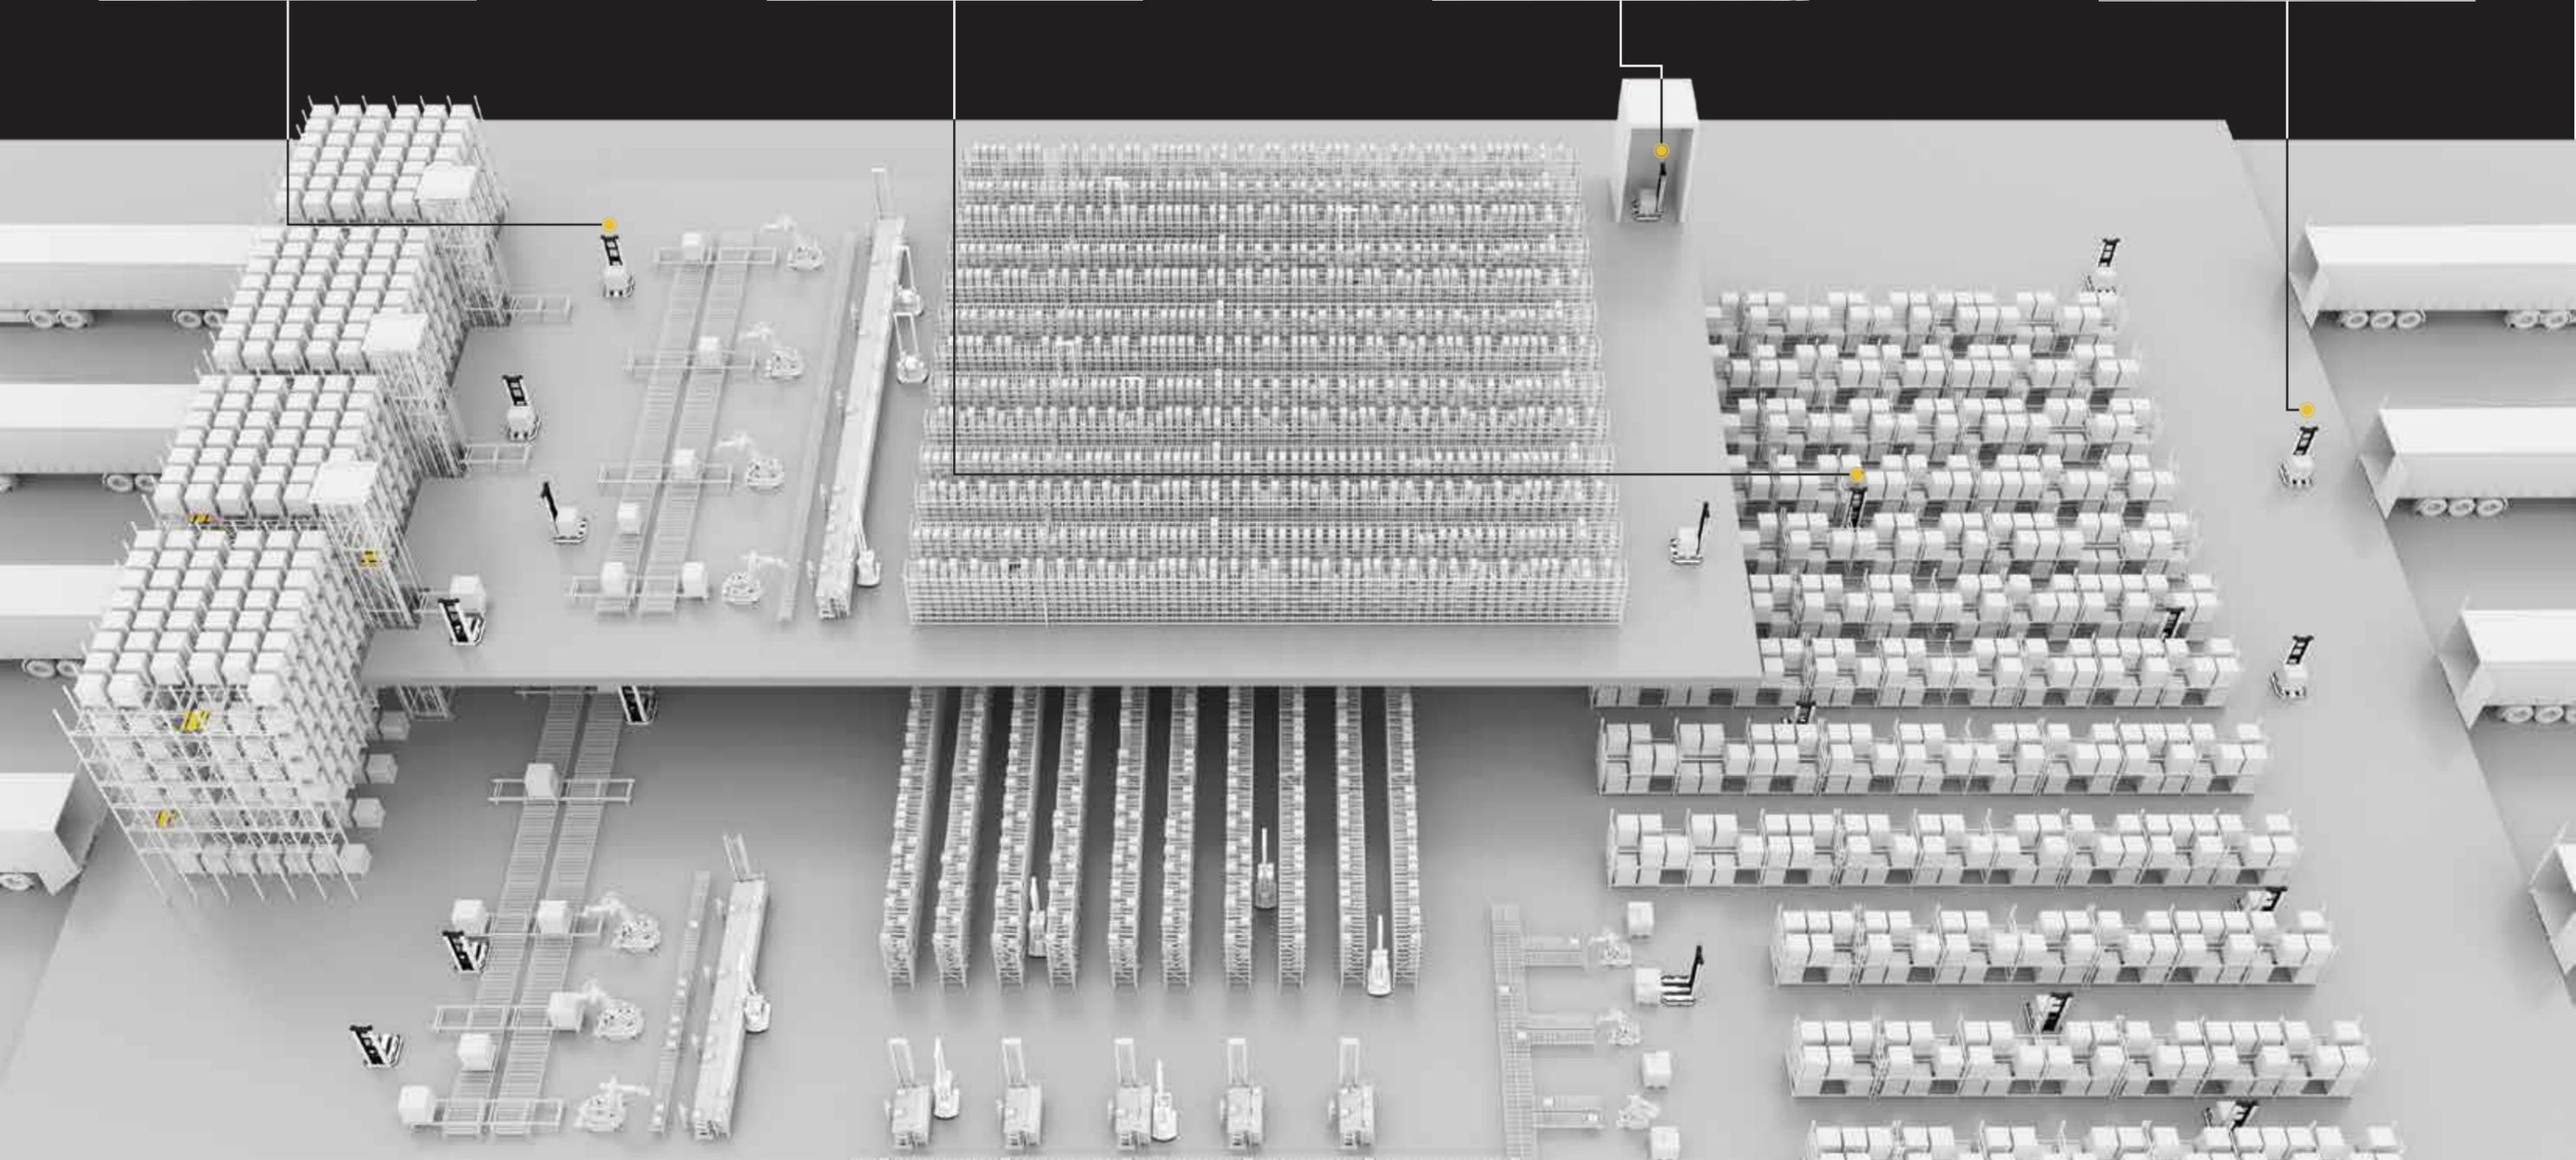

### Storage

### Transportation

### Shipping

# Pallet Transportation Robot Cyber Lift

## CL1QS

### Main Parameters

**Rotating diameter**  
Min. 1850mm

**Navigation**  
Hybrid SLAM + QR code

**Max. Payload**  
1000kg

**Min. height**  
3080mm

**Rated speed**  
1.2m/s

**Operaiton time**  
8h

## CL2QS

### Main Parameters

**Rotating diameter**  
Min. 1600mm

**Navigation**  
Hybrid SLAM + QR code

**Max. Payload**  
1200kg

**Min. height**  
1950mm

**Rated speed**  
1.2m/s

**Operaiton time**  
8h

## Advantages

**Aisle Width**  
Outstanding  
space utilizatio

**Flexibility**  
Directly connnect to conveyors  
and racks from ground

**5G Network**  
Compatible with more  
diversified communication solutions

**Safety**  
Safe operation  
ensured by multiple sensors

**Intelligent**  
Pallet misaligned automatic  
recognition and correction

**Efficiency**  
Only 1.5 seconds positioning time, 80% efficiency improvement compared with forklift.

**Compact**  
1.65 meter aisle width, 25% space utilization improvement compared with forklift.

**Safety**  
Considering the complexity of scene safety in all aspects, it incorporates multiple types of sensors, which complies with the ISO3691-4 international standard. Complying with ISO3691-4 standard, it incorporates various sensors to ensure scene safety in all aspects.

**Intelligent**  
By using laser radar to scan the pallet orientation, intelligently determines the angle of the pallet fork hole, and autonomously corrects the deviation to complete the pallet pickup.

**Flexibility**  
PTR can pick the pallet from ground directly and without any steel frame, while also being able to lift and dock with conveyors and racks.

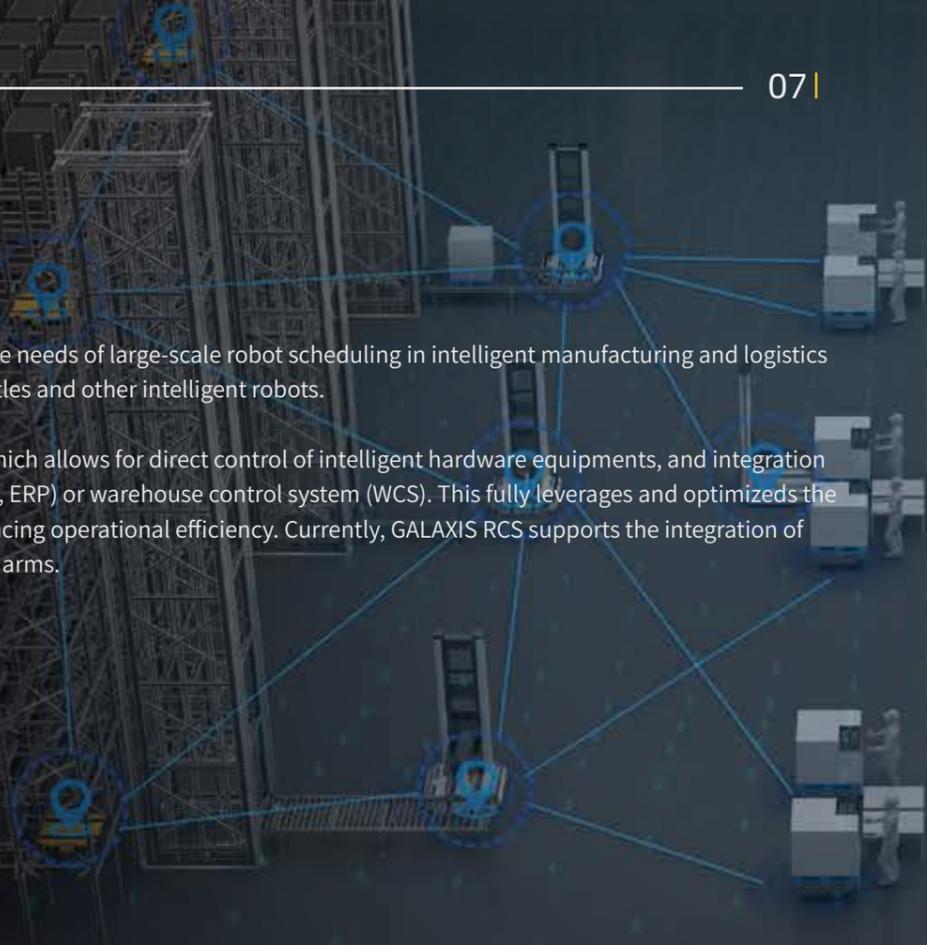

**Duration**  
Equipped with a 75Ah battery, offers multiple chargeing mode includes manual charging, manual battery replacement, and automatic charging.

# RCS Robot Control System

GALAXIS Robot Control System can meet the needs of large-scale robot scheduling in intelligent manufacturing and logistics industries, used to control AMR, pallet shuttles and other intelligent robots.

RCS adopts a micro-service architecture, which allows for direct control of intelligent hardware equipments, and integration with the upper-level business system (WMS, ERP) or warehouse control system (WCS). This fully leverages and optimized the efficiency of robotic devices, thereby enhancing operational efficiency. Currently, GALAXIS RCS supports the integration of devices such as lifts, conveyors and robotic arms.

Multiple equipments control

Flexible configuration strategy

Optimal path planning

Load balancing and task optimization

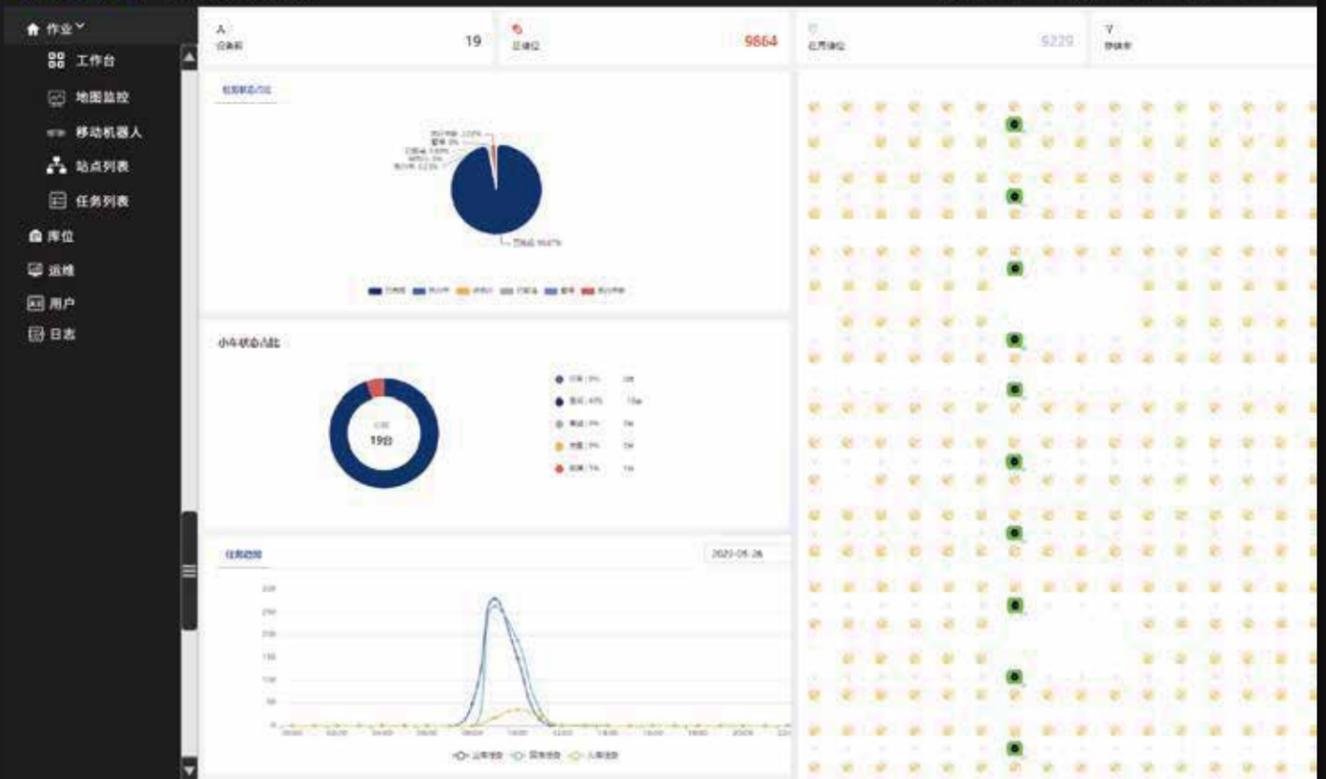

Segmented deployment architecture,  
with more powerful system execution capabilities

Easy deployment, operation and maintenance,  
with a good exception handling mechanism

## GALAXIS 机器人调度系统

## AMR Product Series

High flexibility in production process boosts the booming of intelligent manufacturing. The independently developed Robot Control system and AMR series products by GALAXIS, combine with Hybrid SLAM navigation technology and modular hardware, which can be applied in flexible intelligent solutions that meet multi-industry and cross-scenario needs, support the achievement of full-process logistics automation and data visualization, driving the intelligent upgrade of manufacturing and logistics enterprises.

### » FM Series

FM series can be widely used in various intralogistics scenarios, with lifting function, it can handle pallet, carriers, shelf, material cart, etc. FM robot can be rapidly deployed for any complex environments for modern warehouse.

### » FR Series

Designed for docking with conveyor line and production machines, it can automatically transport in different functional areas, with customized roller loading device and Hybrid SLAM navigation technology, FR robot ensure flexibility and reliability in various scenarios.

### » FS Series

FS robot is a kind of box handling solution, it can dock with conveyors with different height, pick up the cartons or bin from rack and flow rack.

### » PTR Series

PTR Cyber Lift can realize pallet transportation and storage. With minimum 1,650mm corridor width and very small turning radius, it can achieve about 30% system footprint saving.

### » MR Series

Forklift robot are focusing on the automation of transportation needs for standard totes and pallets, using mechanisms such as fork and telescopic fork as the executing devices, in response to user demands.

### FM Robot

#### Product highlights

##### Flexibility and efficiency

- Capable for various workflow scenarios

##### Customizable

- Capable for a wide range of applications

##### Rapid deployment

- Easy to modify and upgrade

##### Driving mode

- Differential mode

##### Precise docking

- Positioning accuracy  $\pm 5$  mm

##### Navigation mode

- SLAM/QR code

## Parameters

Equipment Models	FM100Q	FM300QS	FM1000QS
Dimension L*W*H (mm)	720*500*320	840*600*290	1150*820*315
Spin diameter (mm)	720	975	1150
Weight (kg)	90	135	260
Max. Payload (kg)	100	300	1000
Lift Distance (mm)	60	80	50
Navigation mode	QR code	QR code/SLAM	QR code/SLAM
Maximum operation speed (m/s)	2.2	2.2	1.2
Positioning accuracy (mm)	$\pm 5$	$\pm 5$	$\pm 5$
Stop angle accuracy ( $^{\circ}$ )	$\pm 1$	$\pm 1$	$\pm 1$
Maximum span height (mm)	5	5	10
Climbing ability (% gradient)	6 ( $3^{\circ}$ angle)	6 ( $3^{\circ}$ angle)	6 ( $3^{\circ}$ angle)
Rated operating time (h)	12	8	8
Battery capacity (Ah)	24	24	42
Rated voltage (V)	48	48	48
Battery life cycle (T)	1500	1500	1500

## Project reference

### Wine Cabinet Manufacturer Warehouse (China)

GALAXIS provided a comprehensive AMR intelligent solution to this wine cabinet manufacturer. The solution adopted dozens of AMR units in conjunction with the RCS, overcoming the production line bottleneck in the factory, and achieving complete automation in transportation and storage.

- Increase in production capacity by 100% and significant decrease in labor and management costs
- High flexibility, rapid deployment, and easy relocation, enabling high logistics flexibility and inventory in the factory

### Raw Materials Warehouse of Relay Factory (China)

GALAXIS designed a comprehensive logistics solution includes AS/RS, transportation, and sorting. The solution includes shuttle storage area for raw materials, semi-finished goods warehouse, finished goods warehouse, and an automatic palletizing area, providing an all-in-one logistics automation solution.

- Realization of overall visual management
- Increase production capacity by 50%, and decrease in production cost
- Seamless integration with the production line, which significantly improved efficiency, ensuring production quality

### A Famous Public Library (China)

GALAXIS, as the integrated solution provider and equipment supplier for the project, provided shuttle system, lift system, and AMR system-related equipment and services, realizing the storage and circulation needs of over 300,000 books.

- Increase space utilization rate by 50%
- Increase book collections by 30%

### Leading Pharmaceutical Enterprise Logistics Center (China)

GALAXIS provided the enterprise with a comprehensive intelligent logistics integration system, which was successfully deployed and efficiently applied for automated operations such as collection, return, storage and retrieval, and sorting of various medicines. As the first PTR project in the industry, it has become a benchmark in northeastern China.

- Storage increased by over 30% compared to traditional solutions
- Full replacement of pallet transportation and manual labor

### BottleCap Manufacturer Factory (China)

GALAXIS provided a complete AMR intelligent transportation solution for a renowned bottle cap manufacturer. The solution was tailored to adapt to the current production process and the application of automated logistics, effectively reducing manual labor and improving the operation efficiency of production and logistics.

- Dynamic recognition with accuracy close to 100%
- Seamless integration with the production line, improving overall efficiency and capacity
- Automatic 1-hour fast charging, improving the utilization rate of robots

### Textile Enterprise Warehouse (China)

GALAXIS planned and implemented a complete logistics automation solution for its industrial park. By using automation equipment in collaboration with related software and hardware systems, it achieved closed-loop coordination of logistics, production, warehousing, sorting, and shipping operations within the park.

- "Goods to Person" operation mode by over a hundred PTR units
- Full replacement of manual transportation
- Increase in site utilization by 35% compared to manual stacking

## Project reference

### Parts Manufacturer Warehouse (China)

GALAXIS provided a complete logistics automation solution for a well-known industrial parts enterprise in Wuhan. The solution realized the automatic transportation of PTR and conveyor line, recycle and stacking of empty pallets, disassembly of empty pallet groups at inbound area, and automatic container supply.

- Completion of deployment and commissioning in two weeks
- Unmanned and contactless transportation with equipment failure rate less than 0.001

### A Public Security Bureau Warehouse (China)

GALAXIS provided an AMR and intelligent warehouse system for a public security bureau project in Shenzhen. The system is easy to operate, significantly increasing the storage capacity and operational efficiency of the property management center, while reducing the workload of warehouse personnel. The solution meets requirements while ensuring safety and value preservation.

- Full-process unmanned horizontal and vertical transportation and storage within the warehouse
- Real-time control of all property and physical evidence, ensuring that warehousing records match with the physical flows

### A Public Security Bureau Warehouse (China)

GALAXIS provided a full SLAM-navigated AMR solution for a well-known new energy customer in Hangzhou, enabling AMR transportation and docking operations for materials.

- 360° laser scanning both in the front and back, ensuring a smooth and seamless motion docking process
- Adoption of SLAM navigation, no other positioning aids are required on the ground

### Products Warehouse in Semiconducto factory (China)

GALAXIS provided a complete storage area for finished products, material transportation system, automated packaging production line, intelligent stacking, and other components for a leading semiconductor industry customer in Tianjin. These components were seamlessly interconnected, creating a fully automated and unmanned intelligent storage service system.

- Pallet transportation by AMR instead of conveyors, allowing for flexible site layout
- The AMR operating site can be expanded according to business needs, with a short deployment cycle

### Pharmacy Distribution Center (China)

GALAXIS provided a complete logistics solution for a pharmaceutical project in Qingdao, utilized the AMR system to achieve unmanned transportation and sorting operations from the AS/RS to manual picking stations, as well as automatic sorting using robotic arms.

- Meeting the daily shipment requirement of 4,000 boxes from the warehouse
- Realizing unmanned and automated transportation within the warehouse, decreasing labor costs

### A Renowned Pharmaceutical Enterprise Warehouse (China)

GALAXIS provided integration services for a pharmaceutical project in Nanchang. In the project, the PTR solution realized automated transportation and docking, compact storage and sorting in multi-story warehouses, as well as operations like stacking empty pallets.

- 1.7-meter aisle width, increasing storage capacity by 30% compared to traditional automation solutions
- Sorting is carried out in a pallet-to-person mode, increasing efficiency by 50%
